Quick Change Oval Cylinder Key Switch

Quick Change Oval Cylinder Key Switch

Royce Security Products

Royce Security Products is an Australian owned and operated company specialising in the design and manufacture of application specific security products. Royce utilises unique, practical and creative design techniques to create products that are focused on quality and performance. Royce's industry experience, gained through the creation of products for custom security applications, translates into a unique understanding of the delicate relationship between product quality and cost effectiveness.

With Royce Security Products you can always be assured that the product you receive is of superior quality at a competitive price.

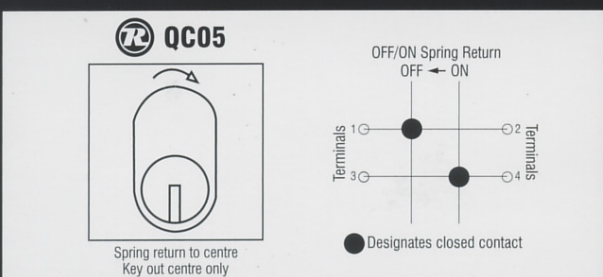

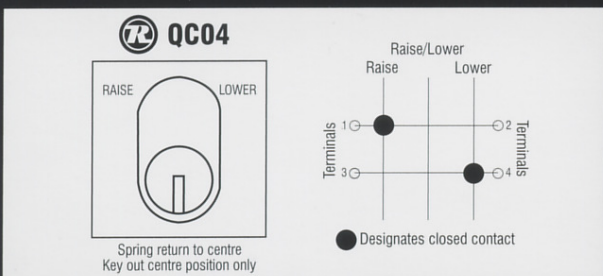

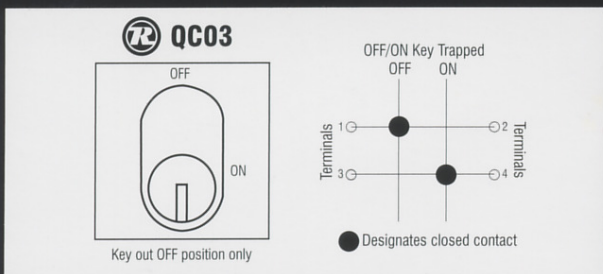

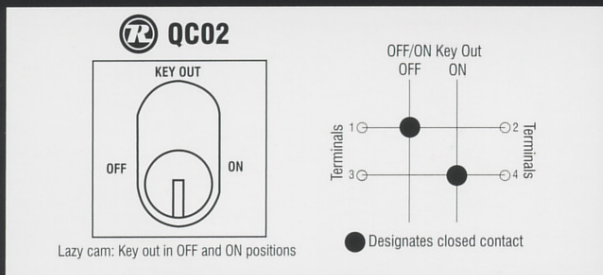

QC Series of Oval Cylinder Key Switches

Royce's Quick Change Cylinder series of key-switches allows you to combine the highest quality electrical switch with the key system of your choice. Simply attach the cam provided to the back of a standard oval cylinder, insert the cylinder and retaining pin into the housing and you're ready to install!

This makes adding a Royce QC series switch to an existing master key system as simple as loading an oval cylinder! Royce's QC series of switches comprises four standard models whose functions cover the majority of basic switching applications including roller doors, escalators, alarm systems, automatic gates, production line machinery, air-conditioning units and many more.

The simplicity of the QC series design makes for easy repair and replacement of the cylinder as well as increased reliability through the reduced number of moving parts and utilisation of brass and steel componentry. Custom escutcheon engraving is available, please consult your distributor. The QC range is a testimony to lateral thinking at the development stage, strict adherence to quality, and competitive pricing.
